School: Efi Arazi School of Computer Science M.Sc.

Automata and Games

Lecturer:
Prof. Udi Boker  udiboker@idc.ac.il

Teaching Assistant:
Prof. Udi Boker  udiboker@idc.ac.il

Course No.: 3589  Course Type : Elective  Weekly Hours : 3  Credit: 3

Course Requirements : Final Exam

Language: Hebrew

Prerequisites

Prerequisite: 52 - Calculus I  53 - Calculus II  54 - Linear Algebra I  55 - Linear Algebra II  56 - Discrete Mathematics  59 - Data Structures  69 - Logic And Set Theory  417 - Introduction To Computer Science  643 - Automata And Formal Languages

Group Code : 222358900
Course Description

The course will provide general background on automata and games and will focus on automata and games that run indefinitely.

It will include the following topics.

Automata:
We will study on the different aspects of automata over infinite objects: automata over words and over trees, deterministic, nondeterministic, and alternating automata, the various acceptance conditions (such as parity and Rabin), and more.
We shall analyze the pros and cons of each type, study algorithms for performing operations on automata, such as union and complementation, and study algorithms for translating between the different types.
We shall also look into the connection between automata and logic, as well as the connection between automata and games.

Games:
We shall overview the different aspects of game theory: zero-sum games vs. win-win games, two-player vs. multiple-player games, finite and infinite games, stochastic games, winning conditions, strategies, winning strategies, determinacy, strategy memory, perfect and imperfect information, and more.
We shall concentrate on zero-sum two-player infinite games, on which we will study on various winning conditions, such as reachability and parity, determinacy, and algorithms for finding winning strategies.

Course Goals

Acquire understanding of automata and games, and how to use them in various fields of computer science, mathematics, and other areas disciplines.

Grading

Grade

80% the exam and 20% the exercises.

For passing the course, one should have at least 60 in the exam and at least 60 in the final grade.

Exercises

There will be 6 exercises, some of which to be submitted in pairs.
The exercises' grade will be the average of the best 5 exercises.
For attending the exam, the student should submit at least 3 exercises.
Lecturer Office Hours
TBD
