

Aviram Sustainability and Climate Program

The Aviram Sustainability and Climate Program offers a year-long, state-of-the-art curriculum designed for up to 20 exceptional undergraduate students in their last year of studies from across all schools on campus. The Program addresses the pervasive and most consequential challenges of our time: keeping humanity within the Planetary Boundaries and making the just transition to a zero-carbon future.

Program's purpose and structure

The Program is designed to empower emerging and established thought-leaders, decision-makers, and visionary entrepreneurs with comprehensive academic insights and practical skills essential for catalyzing the shift towards a carbon-neutral, ecologically resilient future.

Students engage with diverse and pressing issues including climate change, extreme weather events, plastic and chemical pollution, water scarcity, food insecurity, the energy crisis, deforestation, desertification, and biodiversity loss.

The Program consists of three core courses, including The Planetary Boundaries (3 credits), Environmental Change and Human Behavior (3 credits) and, Environmental Change and Emerging Technologies (3 credits), all taught in the first semester.

Upon completion of the three core courses, students will participate in a study tour to Europe, where they will visit leading scholars, scientists, entrepreneurs and business leaders.

In the second semester, students participate in the program's Sustainability Workshop, a semester-long capstone course (5 credits) where they will work in teams to develop a tangible solution, technological or otherwise, to an open-ended, real-world sustainability challenge. Student teams will be guided by industry experts and academic mentors.

In addition, students take part in unique master classes and seminars, including in Generative Artificial Intelligence (Gen. AI), Climate-Tech Feasibility Assessments and Investing, the Voluntary Carbon Market (VCM), Effective Communication and Storytelling, and Career and Vocational Development.

Graduates of the Aviram Program will join a network of alumni and associates working across all sustainability disciplines and domains.

Program requirements

The program is open for exceptional students in their last year of studies from across all schools on campus. Participation in the program requires fluency in English and working knowledge of Hebrew, specifically listening, and basic reading comprehension. After application vetting, a

limited number of students are invited for case study interviews to determine their creative and problem-solving abilities.

Program of Studies – The Aviram Sustainability and Climate Program

Course Code	Course Name	Lecture Hours	Credits	Comments
4934	הגבולות הפלנטריים	3*	3	7 meetings
4935	שינוי באמצעות טכנולוגיה מתקדמת	3*	3	7 meetings
4936	שינוי באמצעות התנהגות והרגלים	3*	3	7 meetings
5353	פרויקט גמר	5**	5	11 meetings
4938	Communicating for influence	2**		4 meetings
4939	Climate tech investing	2**		3 Meetings
5984	Careers toolbox	2**		3 Meetings
5446	ideation workshop	2*		4 Meetings
5986	סיור אקדמי חו"ל	1*	1	
5987	סיור אקדמי ישראל	1*	1	
Total Semester Hours			16
